

⚡ Jev Judge Setup Guide

Complete guide to clone the repo, configure the Jev API key via OpenRouter, load the Chrome extension, and classify X (Twitter) posts in real time.

🕒 **Setup Time:** ~3
Minutes

🖥️ **Prerequisites:** Node.js (v18+) & Google
Chrome

💰 **Cost:** Free demo mode or ~\$0.042 / 1M tokens on
Jev

1 Clone the GitHub Repository

Open your terminal and clone the official project repository to your local machine:

```
git clone https://github.com/xolotlwastaken/jev-judge.git
cd jev-judge
```

2 Get Your Jev API Key from OpenRouter

TypeSafe AI's Jev model is hosted on OpenRouter as `~typesafe/jev-latest` via their Decisions API. This gives you instant access with **zero waitlist**:

1. Navigate to <https://openrouter.ai> and log in or create a free account.
2. Go to **Keys** (<https://openrouter.ai/keys>) and click **Create Key**.
3. Name your key `jev-judge` and copy the generated key (format: `sk-or-v1-...`).
4. (Optional) Add a small credit (\$1 to \$5) in OpenRouter Settings. At **\$0.042 per 1M input tokens**, \$1.00 classifies more than **20,000 tweets!**

💡 **Offline Demo Mode:** Don't have an OpenRouter key yet? No problem! If no key is set, the backend automatically runs in smart Local Demo Mode with simulated classifications so you can test immediately.

3 Configure & Start the Backend Server

The local backend securely handles Jev API calls, tracks token spend, and deduplicates posts with an in-memory cache:

```
# 1. Navigate into the server directory and install dependencies
cd server
npm install

# 2. Copy the example configuration to create your .env file
cp .env.example .env
```

Open `server/.env` in your code editor and paste your OpenRouter key:

```
OPENROUTER_API_KEY=sk-or-v1-your_actual_openrouter_key
PORT=8787
DEBUG=false
```

Start the backend in development mode:

```
npm run dev
```

✅ **Success output:** Jev Judge Backend running on <http://localhost:8787> · Active Provider: OpenRouter (Jev)

4 Load the Chrome Extension

Install the unpacked extension directly into Google Chrome in just a few clicks:

1. Open Google Chrome and visit: `chrome://extensions`
2. In the top-right corner, toggle **Developer mode** to **ON**.
3. Click the **Load unpacked** button in the top-left toolbar.
4. Navigate into your cloned `jev-judge` directory and select the `extension` folder.
5. **Jev Judge** will immediately appear in your extensions list with its purple diamond icon.

5 Test Live on X (Twitter)

Now experience real-time AI classification as you scroll:

1. Open `https://x.com` in Chrome (or refresh any existing X tab).
2. Look in the bottom-right corner: you'll see the floating **JEV HUD Pill**: `♦ JEV · 0 judged · $0.00000`
3. Start scrolling! Posts entering your view will briefly display `♦ JEV JUDGING...` and resolve in ~200ms.

Category	Visual Effect on X	Classification Criteria
 BREAKING	Neon green strobe badge + green border glow	Major AI model launches, research papers, releases
 GOLDEN NUGGET	Golden shimmering badge + gold accent border	In-depth tutorials, code snippets, benchmarks, prompts
 MEH	Subtle grey badge + grey left accent line	Casual banter, everyday thoughts, routine chatter
 AI SLOP	Permanent animated meme stamp + red siren border	Hype threads, recycled platitudes, impression farming

Extension Popup Dashboard: Click the Jev Judge icon in Chrome's toolbar to view your cumulative session stats, per-category breakdown, and exact dollar spend. Click **Reset session** to wipe all DOM stamps and start fresh.

★ Troubleshooting & Pro Tips

• Badges say "JEV UNAVAILABLE"?

Ensure your backend terminal is running on port 8787. You can check health by running `curl http://localhost:8787/health` in your terminal.

• Modified extension styles or scripts?

Whenever you make changes to files in `extension/`, go to `chrome://extensions`, click the **reload icon** (🔄) on Jev Judge, and hard-refresh X (`Cmd + Shift + R`).

• Split-Screen YouTube Layout:

Position your browser with X on the left and your terminal running `npm run dev` on the right. Your audience can watch classifications and micro-penny costs resolve simultaneously as you scroll!
