

Jev Judge Setup

github.com/xolotlwastaken/jev-judge

How to clone the repository, connect the Jev model via OpenRouter, load the Chrome extension, and run real-time post classification on X.

01 Clone the repository

Clone the project and install the backend dependencies:

```
git clone https://github.com/xolotlwastaken/jev-judge.git
cd jev-judge/server
npm install
```

02 Get an OpenRouter API key

TypeSafe AI's Jev model is hosted on OpenRouter as `~typesafe/jev-latest`. You can access it directly with no waitlist:

1. Sign in at openrouter.ai and go to openrouter.ai/keys.
2. Click **Create Key**, name it `jev-judge`, and copy the key (`sk-or-v1-...`).
3. (Optional) Add \$1 credit. At \$0.042 / 1M input tokens, \$1 covers over 20,000 tweets.

Note: If you leave the key blank, the backend automatically runs in offline demo mode with simulated classifications for testing.

03 Configure `.env` and start the server

Copy the example environment template inside the `server/` directory:

```
cp .env.example .env
```

Open `server/.env` and set your key:

```
OPENROUTER_API_KEY=sk-or-v1-your_actual_key_here
PORT=8787
DEBUG=false
```

Start the backend:

```
npm run dev
```

✓ Terminal will display: `Jev Judge Backend running on http://localhost:8787 · Active Provider: OpenRouter (Jev)`

Extension & Live Feed

chrome://extensions

04 Load the Chrome extension

Load the unpacked extension folder into Chrome:

1. Open Google Chrome and navigate to `chrome://extensions`.
2. Turn on **Developer mode** using the toggle in the top-right corner.
3. Click **Load unpacked** in the top-left toolbar.
4. Select the `extension/` folder inside the cloned `jev-judge` directory.

05 Open X and test in real time

Go to **x.com** in Chrome (or refresh any tab). As you scroll through your feed:

- A floating **JEV HUD pill** appears in the bottom-right corner tracking judged posts and spend in real time.
- Posts in your viewport flash `♦ JEV JUDGING...` and resolve into one of 4 categories within ~200ms:

CATEGORY	VISUAL TREATMENT	WHAT IT CLASSIFIES
BREAKING	Neon green strobe badge + green border glow	Major model launches, releases, announcements
GOLDEN NUGGET	Golden shimmering badge + yellow accent border	Practical tutorials, code, workflows, benchmarks
MEH	Subtle grey badge + grey left border	Routine thoughts, casual banter, everyday chatter
AI SLOP	Permanent animated meme stamp + red siren border	Recycled threads, hype bait, engagement farming

Click the extension icon in the toolbar to see cumulative counts, total dollar spend, or click **Reset session** to wipe cached stamps and start fresh.

06 Quick tips & troubleshooting

- **Badges say UNAVAILABLE?** The backend must be running on port 8787. Verify with `curl http://localhost:8787/health`.
- **Made changes to code or styles?** Go to `chrome://extensions`, click reload (↻) on Jev Judge, and refresh X (`Cmd + Shift + R`).
- **Recording a demo?** Position X on the left side of your screen and the terminal on the right. Your audience can watch classifications and costs log simultaneously.
